PROFILE

I build things that move. Frontend engineer trained at Nupat Technologies, Lagos — focused on the intersection of engineering rigour and motion design. Three fully deployed projects across e-commerce, fintech, and SaaS. Self-driven, detail-obsessed, and always thinking about how the interface *feels*, not just how it works. Looking for a remote junior role where craft actually matters.

PROJECTS

E-Max Trade — Crypto Merchant Trading Platform

React · Vite · React Router · Custom CSS · Vercel | e-max-trade-p3nd.vercel.app

- Built for a real client who was running crypto trades manually over WhatsApp — turned a messy DM workflow into a professional, multi-page web platform.
- Engineered a dual-portal architecture from scratch: full customer portal (auth, dashboard, trade history, payout accounts, security settings) and a completely separate admin portal with market rate controls, order management, and a transaction approval flow.
- Built a live crypto rate calculator with buy/sell toggle across USDT, BTC, ETH, and SOL — all pure React state, zero backend dependency.
- 13 distinct screens, consistent design system, scrolling transaction ticker.

Vestige — Luxury Sneaker E-Commerce

React 19 · React Router DOM v7 · Vite · Custom CSS · Vercel | vestige-edit.vercel.app

- Designed and engineered a full luxury e-commerce experience from zero — brand identity, UI system, and all frontend logic. No component libraries. No shortcuts.
- 5 pages: editorial hero, collection grid, product detail with size selector, archive with status tags, and a cart page renamed "Acquisition Manifest" — because the brand demanded it.
- Scroll-triggered reveal animations via React Intersection Observer — cinematic pacing that makes it feel like a fashion lookbook, not a shop.

Habit Architect — Psychology-Based Habit Tracker

React · React Router · localStorage · Vercel | habit-tracker-six-irid-44.vercel.app

- Multi-page habit tracking app — Dashboard, My Habits, Anti-Habits, Progress, Settings — with client-side routing and full offline support via localStorage.
- XP levelling system with 10 ranks (Novice to GOAT), 30-day GitHub-style heatmaps, streak tracking, and a Focus Mode that reads the current hour to surface priority habits.
- Zero backend. Fully functional offline. Shipped and deployed.

TECHNICAL SKILLS

Languages JavaScript (ES6+), HTML5, CSS3

Frameworks	React 19, React Router DOM v7, Framer Motion, GSAP
Styling	Tailwind CSS v4, Custom CSS, Glassmorphism, CSS Animations
Tools & Platforms	Git, GitHub, Vite, Vercel, npm, VS Code, Figma
Concepts	Component Architecture, Client-side Routing, State Management, Responsive Design, Scroll Animations, Performance Optimisation

EDUCATION & TRAINING

Frontend Web Development — Nupat Technologies

Lagos, Nigeria · 2024 – Present

Hands-on training in modern frontend development. Built and deployed real-world projects from concept to production across React, JavaScript, HTML5, and CSS3.

Secondary School Certificate — WAEC/NECO

Lagos, Nigeria

Available full-time · Remote · WAT (UTC+1) · Expected: \$24,000–\$28,000/year
